

Resilience Hub Building Walkthrough Template

Building Name _____

Address _____

Name _____

Date _____

People Present _____

ELECTRICAL

Electrical Panel: Panel Type (fuse vs breaker); Panel capacity (100/200 amp); Panel code compliance; Number of open breakers, size (singles, doubles, quads); Panel distance to main gas line and water line (3ft minimum in California); Wiring type (knob, tube, or other); Wire gauge; Main line connection type; Service line type (underground or overhead); Electricity provider; Likelihood of triggering a transformer upgrade; Presence of Backup power (battery/diesel);

- ☐ Took picture of electrical panel
- ☐ Get a winter and summer bill from property managers

Large Appliance Plug Load: List appliances (water and space heating, cooking equipment, compute, etc.); Default electricity rating, Test load for large appliances without a nameplate capacity visible; Availability of 240V outlets and location; appliances using 240v

- ☐ Took picture of each large appliance

Additional Notes:

Resilience Hub Building Walkthrough Template

Lighting: LED vs. Fluorescent, Lighting differences between rooms

Load Calculation: Calculate with NEC 220.83 or 220.87 (best to avoid panel upgrade), Conduct contractor method

STRUCTURE

Construction/Building Type: 1 - 5 scale (1 = fire resistive, 2 = non-combustible, 3 = ordinary, 4 = heavy timber, 5 = wood framed); Mix of Types; Existence of balloon framing, Fire code non-compliance

Windows: Rating, Style; Brand; Age; Average Number of Panes; Sealing Condition; Framing material; Opening mechanism (casement, crank out, sash), Window differences between rooms

Framing + Subframing: Stud/Rafter Spacing; Material Type; Rot, Woodworm or Termites; Drywall condition

Wall Insulation: Type; R-Value; Thickness (inches); Thermal imaging hotspots; Potential to add insulation; Presence of holes/voids (infiltration)

Attic + Crawl Space: Accessibility; Size of opening (for equipment sizing); Foundation type; Clearance (desired: 18" crawlspace, 24" attic); General Condition (poor, acceptable, excellent); Barriers to updating ducts or wiring

Presence of Asbestos: Quantity; Condition of asbestos; *(Look for cast-like appearance on ducts)*

Resilience Hub Building Walkthrough Template

Roof: Style (flat, gable); Materials used (concrete, metal shingles); Signs of damage (leaks, rot, etc.); Age (remodels); Insulation (refer above); Size and structural assessment for solar; Quality of materials used (brands)

☐ Take pictures of roof

Square Footage: Roughly Estimate; Compare to Property Shark value / Floor Plan / Cubi Casa (Ensure Correct)

Lead: Testing kit result; Consider age of building (defer to contractor)

PLUMBING

Water Heating System: Type (gas vs heat pump), System specification/rating; Inputs and outputs (water, gas, electricity, condensation drip); Supply line condition (gas/water leakage); Water heater stand; Stability; Pan; Drainage; Ventilation; Location (potential relocation); Retrofit date if done; Barriers to future retrofit; CO detector

Bathrooms: Number of bathrooms; Number of toilets & urinals per bathroom; type Location of bathroom, Presence of non-gendered bathrooms

Showers: Number of showers; Space to add shower; Average use of showers

Laundry: Presence of washer and dryer; Type (front/side load, gas, heat pump, combination washer dryer); System specification/rating; Inputs and outputs (water, gas, electricity, vent to ambient); Supply line condition (gas/water leakage); Ventilation; Location (potential relocation); Retrofit date if done; Barriers to future retrofit; CO detector

Resilience Hub Building Walkthrough Template

General Leaks & Pipe Concerns: Corrosion; Low/High Faucet flow rate (gal/min);

HVAC

Heating and Cooling System: Type; Age; Cooling/heating capacity (BTU per square foot); Efficiency/coefficient of performance, Functionality according to users; Maximum duration at full capacity (max rated run time), Further system specification; CO detector

☐ Took pictures of heating and cooling system

Ducts: Ductless; Ground or ceiling; Air filter type; Insulation; Asbestos; Taping; Sealing; Efficiency and losses

Lots of insulated ducts all over roof.all units have some sort of air filtration

Should create dedicated Ceiling Section

ACCESSIBILITY

ADA Compliance: Staircases code compliance, Ramps; Elevator (if more than one story)

Building Capacity: Number; Building capacity postage (fire marshal assessment)

Parking: Location; Capacity (number of spaces, total area), Handicap parking spaces

Resilience Hub Building Walkthrough Template

FACILITIES/SERVICES

Health: First aid kit; AED; etc.

Communication System: Phone; Internet; Fax; etc.

Kitchen: Yes/no; Refrigeration capacity; Industrial cooking appliances; Stovetop type (electric, induction, gas), Food storage space; Dishwasher, Ice machine, System specifications for each appliance; CO detector

Child Care: Playground; Play space

Pet Care: Outdoor space; Pet shelter

Recreation: Pool table; Ping pong; Chess board; Basketball hoop

Garden: Indoor/outdoor; Size

Open/Storage Space: Total Area (for storing equipment or to house people to sleep)

Resilience Hub Building Walkthrough Template

HEALTH RISKS

All Carbon Monoxide Detectors: Presence on every floor (y/n); Presence in all sleeping areas (y/n); Presence around combustion appliances (y/n) (check above)

Smoke Alarms: Presence on each floor (y/n); Presence in all kitchens/rooms/hallways/bathroom/stairways/etc (y/n); Fire hazard areas

Fire Exits & Sprinklers: Number of exits; Visibility of exit signs in dark; Number of sprinklers present; Last sprinkler system inspection.

Mold: Presence of visible mold or water damage; Color of mold; Presence of deteriorated material; Location/Room

All Presence of Asbestos: Locations; Quantity; Condition of asbestos (check above)

All Lead: Testing kit result; Consider age of building (defer to contractor)(check above)

All Gas Appliances: Type & Location (check above); Outdoor ventilation

☐ Spray and check for leaks

THANK YOU :)

Additional Notes:
